A. The FortiGate unit will evenly share the traffic to 172.20.168.0/24 through both routes.B. The FortiGate unit will share the traffic to 172.20.168.0/24 through both routes, but the port2 route will carry approximately twice as much of the traffic.C. The FortiGate unit will send all the traffic to 172.20.168.0/24 through port1.D. Only the route that is using port1 will show up in the routing table. Answer: C QUESTION 144A FortiGate unit is configured with three Virtual Domains (VDOMs) as illustrated in the exhibit.

Which of the following statements are true if the network administrator wants to route traffic between all the VDOMs? (Select all that apply.) A. The administrator should configure inter-VDOM links to avoid using external interfaces and routers.B. As with all FortiGate unit interfaces, firewall policies must be in place for traffic to be allowed to pass through any interface, including inter-VDOM links. This provides the same level of security internally as externally.C. This configuration requires the use of an external router.D. Inter-VDOM routing is automatically provided if all the subnets that need to be routed are locally attached.E. As each VDOM has an independant routing table, routing rules need to be set (for example, static routing, OSPF) in each VDOM to route traffic between VDOMs. Answer: ABE QUESTION 145A FortiGate administrator configures a Virtual Domain (VDOM) for a new customer. The administrator does not have the proper permissions to reassign the dmz interface.C. Non-management VDOMs can not reference physical interfaces.D. The dmz interface is in PPPoE or DHCP mode.E. Reassigning an interface to a different VDOM can only be done through the CLI.
