

## [2016-NEW! PassLeader Real 90q 70-696 Exam VCE Dumps Help You Passing Exam Easily (Question 46 & Question 60)]

Pass 70-696 exam easily by learning PassLeader 70-696 exam dumps! PassLeader just updated the 90q 70-696 exam questions, the new 70-696 VCE or PDF practice tests cover all the real questions, which will help you passing 70-696 exam easily. What's more, PassLeader's new 70-696 VCE dumps and PDF dumps have corrected many wrong answers, which is not available in other free 70-696 VCE dumps, it will ensure you 100 percent passing 70-696 exam! p.s. Free 70-696 Exam Dumps Collection On Google Drive: [https://drive.google.com/open?id=0B-ob6L\\_QjGLpV3F4VC1ZbC1vOXc](https://drive.google.com/open?id=0B-ob6L_QjGLpV3F4VC1ZbC1vOXc) (Explanation For Every Question Is Available!)

**QUESTION 46**You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers have the Configuration Manager client installed. You have two collections. One collection contains all of the client computers that connect to the network remotely by using a VPN connection. The other collection contains all of the servers. You have a server named WSUS1 that has the Windows Server Update Services (WSUS) server role installed. WSUS1 and Configuration Manager are integrated. You need to deploy update types to meet the following requirements:- VPN clients require all update types except definition updates.- Servers require all update types except update rollups.- Updates must be installed without user intervention.- Administrative effort must be minimized.What should you create? A. two configuration baselinesB. two distribution pointsC. two automatic deployment rulesD. two software update points Answer: C

**QUESTION 47**You have a deployment of Microsoft System Center 2012 R2 Configuration Manager and System Center Updates Publisher 2011. You plan to deploy updates to Adobe Reader version 11. You need to ensure that the metadata for the Adobe Reader updates is downloaded locally to the Updates Publisher server. Which two actions should you perform? Each correct answer presents part of the solution. A. Create a new publication.B. Run the Add Software Update Catalog wizard.C. Modify the Update Server options.D. Add a catalog.E. Create a rule.F. Modify the Trusted Publishers options. Answer: AB

**QUESTION 48**Your network contains one Active Directory domain. The domain contains a deployment of Microsoft System Center 2012 R2 Configuration Manager. You need to update the Configuration Manager catalog from the information in System Center Online. Which site system role should you add? A. Application Catalog web service pointB. Asset intelligence synchronization pointC. Application Catalog website pointD. Windows Intune connector Answer: B

**QUESTION 49**Hotspot QuestionYou have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers have the Configuration Manager client installed. You deploy two applications named App1 and App2. App1 is a large application that is used infrequently. Some users receive notifications indicating low disk space on their client computer. You need to uninstall App1 from any client computer that has both App1 and App2 installed and that has less than 1GB of free disk space. What should you do? To answer, select the appropriate options in the answer area.

Answer Area

Identify computers by:

- Creating a configuration item
- Creating a software category
- Creating a software metering rule
- Creating a device collection that uses a query rule
- Creating a user data and profiles configuration item

Remediation plan:

- Retire App1
- Create a deployment for App1
- Create an automatic deployment rule
- Create and deploy an App-V package for App1

Answer: Answer Area

Identify computers by:

- Creating a configuration item.
- Creating a software category.
- Creating a software metering rule.
- Creating a device collection that uses a query rule.
- Creating a user data and profiles configuration item.

Remediation plan:

- Retire App1.
- Create a deployment for App1.
- Create an automatic deployment rule.
- Create and deploy an App-V package for App1.

**QUESTION 50**You have a deployment of Microsoft System Center 2012 R2 Configuration Manager that was migrated from Configuration Manager 2007 R2. You have a Windows Installer (MSI) package for an application named App1. App1 is deployed to several client computers by using Configuration Manager 2007 R2. You plan to create a configuration item to modify a registry entry that was created during the installation of App1. You need to identify which detection method must be used for the configuration item. What is the best detection method to identify? More than one answer choice may achieve the goal. Select the

BEST answer. A. Use Windows Installer detection. B. Always assume application is installed. C. Use a custom script to detect this application. D. Detect a specific application and deployment type. Answer: A

QUESTION 51 You deploy the Endpoint Protection client in Microsoft System Center 2012 R2 Configuration Manager to all client computers. You plan to deploy an antimalware policy to the users in the research department. You need to ensure that the research department users can exclude some processes from the Endpoint Protection client manually. Which settings should you modify in the antimalware policy? A. real-time protection B. default actions C. threat overrides D. advanced Answer: D

QUESTION 52 You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers have the Configuration Manager client installed. You need to ensure that only the client computers in a branch office have Configuration Manager Endpoint Protection settings configured to scan all of the email messages on the computers. What should you configure first? A. the scan settings of a new antimalware policy B. the real-time protection settings of a new antimalware policy C. the exclusion settings of the Default Antimalware Policy D. the default actions of the Default Antimalware Policy Answer: A

QUESTION 53 Drag and Drop Question You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers are configured as Configuration Manager clients. You need to remediate automatically the client computers that are missing a specific registry key. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

QUESTION 54 You work for a company named Contoso, Ltd. The network contains one Active Directory domain named contoso.com. Users have client computers and devices that run the following operating systems:- Windows 8.1 Enterprise- Windows 7 Enterprise- Windows Phone 8.1- Windows RT 8.1- K3S7 Contoso uses Microsoft System Center 2012 R2 Configuration Manager and Windows Intune. The Windows Intune connector is not implemented. Contoso has an internal Microsoft SharePoint 2013 portal. Contoso develops a line-of-business application named App1. App1 has builds for all of its client platforms. You need to recommend a solution for distributing App1 to all of the client computers and devices. What is the best recommendation? More than one answer choice may achieve the goal. Select the BEST answer. A. Use Configuration Manager for distributing App1 to Windows Enterprise clients. Use Windows Intune for distributing App1 to Windows RT, Windows Phone, and iOS clients. B. Use Configuration Manager for distributing App1 to Windows clients. Use Windows Intune for distributing App1 to iOS clients. C. Copy the App1 builds to the SharePoint 2013 portal and grant the users read access to the portal. To the Contoso users, send an email message that contains a URL from which to download App1 from the portal. D. Use Configuration Manager for distributing App1 to Windows Enterprise clients. Publish App1 to the Windows Store, the Windows Phone App+Game store, and the App Store. Answer: A

QUESTION 55 Hotspot Question You manage a multi-site deployment of Microsoft System Center 2012 R2 Configuration Manager. You need to ensure that clients use only their preferred distribution points for downloading content. Which objects and settings should you configure? To answer, select the appropriate objects and settings in the answer area **Answer Area**

Answer: **Answer Area**

Objects:   
 Distribution points  
 Distribution point groups

Settings:   
 Boundary groups  
 Collections  
 Content  
 Group relationship  
 Security

**QUESTION 56** Drag and Drop Question You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers are configured as Configuration Manager clients. You have an existing Configuration Manager deployment of an application named App1. App1 is deployed to a collection that contains the client computers in the engineering department. From Configuration Manager, you add a new application named App2. App2 will replace App1. You need to prevent further installations of App1 and to ensure that App2 will be installed on the engineering department computers. App1 must be removed only once App2 is installed. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

- Retire App1.
- Delete App1.
- Create a deployment that has an uninstall action for App1.
- Create a deployment that has an install action for App2.
- Delete the deployment of App1.

**Answer Area**

www.passleader.com

Answer:

**Actions**

- Delete App1.
- 
- 
- Delete the deployment of App1.

**Answer Area**

- Retire App1.
- Create a deployment that has an install action for App2.
- Create a deployment that has an uninstall action for App1.

**QUESTION 57** Drag and Drop Question You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. You have laptops that run Windows 7 Enterprise and tablets that run Windows 8.1 Enterprise. All client computers have the Configuration Manager client installed. You have an internally developed application named App1. There is a 32-bit version of App1 and a Windows Store version of App1. You plan to deploy App1 by using Configuration Manager. You need to ensure that the laptops receive the 32-bit version of App1 only and the tablets receive the Windows Store app version of App1 only. The solution must minimize administrative effort. Which three actions should you perform in sequence from Configuration Manager? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

- Import two applications.
- Create one application.
- Deploy one application.
- Deploy two applications.
- Create one deployment type.
- Create two deployment types.

Answer:

**Actions**

Import two applications.

Deploy two applications.

Create one deployment type.

**Answer Area**

Create one application.

Create two deployment types.

Deploy one application.

QUESTION 58 Your company uses Windows Intune to deploy applications to remote users. You plan to deploy several applications to three users. The users and the applications are configured as shown in the following table.

User name	Computer name
User1	Computer1
User2	Computer2
User3	Computer3

[www.passleader.com](http://www.passleader.com)

You plan to deploy the applications to Windows Intune groups. App1 and App3 will be installed automatically. App2 will be available for manual installation. You need to identify the Windows Intune groups to create for the planned deployment. What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

A. Create three computer groups and three user groups.

B. Create two computer groups and two user groups.

C. Create two computer groups and one user group.

D. Create one computer group and one user group.

Answer: C

QUESTION 59 Hotspot Question Your network contains one Active Directory domain named contoso.com. One of the domain controllers has an IP address of 192.168.10.10. Some users have Windows RT 8.1 devices. You plan to use Windows Intune to manage the devices. You need to configure automatic discovery for Windows Intune device enrollment. What DNS record should you add to the contoso.com zone? To answer, select the appropriate options for the DNS record in the answer area.

**Answer Area**

Record type:

- Alias (CNAME)
- Host (A)
- Service location (SRV)
- Text (TXT)

Name:

- EnterpriseEnrollment
- WindowsIntune
- MobileDevices

Target:

- 192.168.10.10
- contoso.microsoft.com
- manage.microsoft.com

QUESTION 60 You manage a virtualization infrastructure that has a Remote Desktop Services (RDS) deployment and a Microsoft Application Virtualization (App-V) infrastructure. The RDS deployment contains a VDI personal desktop collection. The App-V infrastructure contains a publishing server. You need to recommend a solution to ensure that VDI users, to whom App-V

applications are published successfully, can launch the applications even if the App-V infrastructure becomes temporarily unavailable. What should you include in the recommendation? A. Set-AppvClientConfiguration with the -AutoLoad switchB. Appv\_client\_setup\_rds.exe with the /AUTOLOAD switchC. Set-AppvClientConfiguration with the -SharedContentStoreMode switchD. Appv\_client\_setup.exe with the /SHAREDCONTENTSTOREMODE switch Answer: A Download the newest PassLeader 70-696 dumps from passleader.com now! 100% Pass Guarantee! 70-696 PDF dumps & 70-696 VCE dumps: <http://www.passleader.com/70-696.html> (90 Q&As) (New Questions Are 100% Available and Wrong Answers Have Been Corrected!
